

Thomas Oates

L6 BA Hons 3D Design and Craft

This year I created a lighting system that will bring another element to lighting other than just turning the switch on. This lighting system brings a decorative effect to the surrounding spaces with the use of patterns and shadows. When the light is not on it blends into the environment that it is placed in adding a contemporary and stylish object to the room that they are placed in, using a minimal material palette with the use of woods and Veneers. With this, I will be giving the lighting system a natural presence and with this making the light more atmospheric by giving the room a more calm and magical feel, with the use of patterns and shadows to change how the light feels when it is switched on. I have also looked at scales and have designed and created a floor light, wall light, desk light and a chandelier with them all changing the way the room feels in their own way.

Dissertation Title: Sustainability and how's it the focus of today's designers and how they apply it to lighting?
